

TO WHOM IT MAY CONCERN:

With over twenty years of practical experience in software engineering, IT, people's management and a digital transformation specialist, Alexander is accountable for, and manages the overall end to end technical quality of the output of agile development teams, including: functional quality, code quality, test coverage, technical dept and the overall quality of the system design and solution architecture of the systems being developed by the team.

He collaborates and drives initiatives for guiding, supporting release plans and transformation programmes for the Government, Public Organisations, Private sector including eCommerce, Media & Broadcasting, Banking, Hospitality, Education, Energy and Financial Services.

Alexander is a result oriented engineering leader. He embraces being hands on or hands off his duties. Always keen to roll up sleeves if required. Leading by example. In his spare time, he helps to coach and run Business Computing, Programming and Digital Transformation workshops in selected Institutes of Higher Education.

He led the architecture, and end to end software development of a new operating platform. A Governmental Digital Service (GDS) program for the National Cyber Security Council, The GCHQ, BAE and the Home Office. Moving the platform to a micro-service, Headless CMS, native cloud based platform.

The new platform provides improved data harvesting, search discovery personalised feeds, and recommendation engines for unified source of Advice, Guidance and Support on Cyber Security, including the management of Cyber Security incidents.

One of Alexander's achievements in the past was helping with the digital transformation of Marks & Spencer's online eCommerce platform from a disparate monolithic one to an MVC omni-channel, and contributing to developing its mobile iPad platform. Building the POC firstly, then the Checkout and helping with the Account Management features for its online platform.

Alexander worked on the BBC News Interactive Platform, The re-vamped Weather Website, the iPlayer and on the first British Broadcasting Corporation Mobile platform while at the Corporation. He served as internal Consultant to the iPlayer Team on the "**Send to a friend**" module for the application, when it was first built.

Alexander is looking for a fresh challenge to go into a technology led innovative organisation, help deliver change via the appropriate introduction of cutting edge technologies, digital solutions and to improve existing systems through innovation. He is optimistic your establishment can provide him with this challenge and satisfaction.
